

## Ready-to-publish descriptions

NordAI is a software engineering and artificial intelligence firm based in Lévis, Quebec. Founded in 2023, it has worked with more than 40 Quebec companies to design, integrate and operate production AI systems: conversational agents, voice agents, document automation, retrieval-augmented search and LLMOps infrastructure. Its approach pairs an AI-assisted development practice with classical software engineering expertise, which lets it wire AI directly into the systems clients already run. NordAI won the High Technology award at the 2026 Pléiades gala and is a 2026 Fidéides finalist.
